

Assignment part1

1-User requirement:

The application allows the user to communicate with any user from other countries via voice or video calls easily and without the need to hinder.

2 - System requirements:

To use FaceTime effectively, the following features and requirements are required:

A - Internet connection: A stable Wi-Fi or cellular data connection is required.

B - Device compatibility: The device must meet the minimum system requirements for FaceTime, as mentioned earlier.

C - Contacts: To initiate calls, you need contacts with FaceTime-compatible devices or phone numbers/email addresses associated with FaceTime.

3 - Non-functional requirements:

- Performance :

A - The response time should be when the call is received and started promptly, although it should take no more than a few seconds to receive a response.

B - The communication should also be flawless, with clear audio and high-quality video being used.

C - language compatibility:

FaceTime needs to be multilingual, allowing users to utilize it across countries through interfaces tailored to each individual language.
